

Innovative and Stylish

Modern Aluminium windows have been designed to last which is why the aluminium window retain its popularity. The inherent strength and rigidity of aluminium permit slim sight lines which are attractive to the eye and let in maximum light transforming your house both inside and outside.

The aluminium sections are extruded in 6063 alloy and comply with British Standard BS 1474 (1972).

Comfort and warmth is achieved by using the latest thermal improvement technology and improve glazing technology. Aluminium is known for its resistance to rust, rotting and distortion but the introduction of Polyamide technology takes it a new level. It offers improvement in thermal insulation and the opportunity for the dual colour finish.

To keep out those unwelcome intruders, bad weather and draughts, we use hard wearing double weathering sealing as standard on opening windows which are capable of performing to the severest rating required by British Standards.

Alitherm was built with security in mind and will give that extra piece of mind. Alitherm was designed to achieve BS7950 (Secured by Design). Locking handles and multi point locking are standard features.

Alitherm Windows and Doors

Thermally improved aluminium windows and doors give you designed, strength and security to help resist the most unwelcome visitors. By using shaped outerframes and vents the characteristics of traditional windows can be introduced in slim and attractive sight lines.

Technical Information

Description:

Aluminium thermally improved windows with the option to fit into timber frames or fit directly to the brick work giving the style of traditional windows. High security sash with two aluminium walls to give extra rigidity. An elegant ovolo design simulates traditional timber windows.

Finishes:

Available in white, brown and black polyester powder coated paints.

Glazing:

Can be glazed using internal or external beads. A captive bead gasket gives improved weathering performance.

Locking System:

Multi point locking systems to give maximum security. Designed with BS 7950 in mind.

Performance:

Tested to comply with the severest weathering performance as laid down by British Standards.
