

Secure and Elegant

A brand new aluminium patio door is the perfect product to compliment aluminium windows and doors.

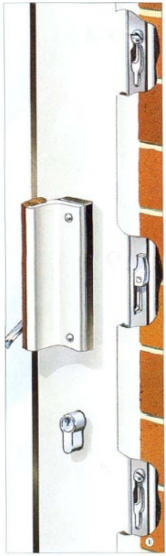

Unlike old aluminium patio doors, our advanced new range feature the latest in energy efficient insulation, innovative security features, and hardware mechanisms that ensure smooth, easy operation for every member of the family.

Within the centre of the aluminium frame sits a thermal barrier, which helps prevent the colder temperatures outside transferring to the inside. Combined with the latest energy efficient glass technology your room will be warmer while your heating bills – and harmful emissions – actually reduce.

The durable aluminium frames are elegant and slim to allow maximum light and sunshine, whilst the inherent strength of aluminium and rugged new locking systems will deter even the most determined intruder.

Available in a range of finishes and options, your new aluminium patio door will be installed by us to the very highest standards.

Aluminium Patio door

This thermally improved Patio Door combines thermal efficiency with the durability of aluminium to give you slim attractive sight lines that retain the strength to ward off unwelcome visitors. This Patio Door has an excellent pedigree
